

# Energy Performance Certificate

**5 Saras Foundry, Trevithick View, CAMBORNE, TR14 8FZ**

<b>Dwelling type:</b>	Top-floor flat	<b>Reference number:</b>	2488-5068-6315-9382-7940
<b>Date of assessment:</b>	28 May 2012	<b>Type of assessment:</b>	SAP, new dwelling
<b>Date of certificate:</b>	28 May 2012	<b>Total floor area:</b>	64 m <sup>2</sup>

## Use this document to:

- Compare current ratings of properties to see which properties are more energy efficient

**Estimated energy costs of dwelling for 3 years:**

**£1,020**

## Estimated energy costs of this home

	Current costs	Potential costs	Potential future savings
Lighting	£108 over 3 years	£108 over 3 years	Not applicable
Heating	£450 over 3 years	£450 over 3 years	
Hot Water	£462 over 3 years	£462 over 3 years	
<b>Totals</b>	<b>£1,020</b>	<b>£1,020</b>	

These figures show how much the average household would spend in this property for heating, lighting and hot water. This excludes energy use for running appliances like TVs, computers and cookers, and any electricity generated by microgeneration.

## Energy Efficiency Rating

The graph shows the current energy efficiency of your home.

The higher the rating the lower your fuel bills are likely to be.

The average energy efficiency rating for a dwelling in England and Wales is band D (rating 60).

### Summary of this home's energy performance related features

Element	Description	Energy Efficiency
Walls	Average thermal transmittance 0.23 W/m <sup>2</sup> K	★★★★★
Roof	Average thermal transmittance 0.14 W/m <sup>2</sup> K	★★★★★
Floor	(other premises below)	—
Windows	High performance glazing	★★★★★
Main heating	Air source heat pump, radiators, electric	★★★☆☆
Main heating controls	Time and temperature zone control	★★★★★
Secondary heating	None	—
Hot water	From main system	★★★☆☆
Lighting	Low energy lighting in all fixed outlets	★★★★★
Air tightness	Air permeability 4.5 m <sup>3</sup> /h.m <sup>2</sup> (as tested)	★★★★☆

Thermal transmittance is a measure of the rate of heat loss through a building element; the lower the value the better the energy performance.

Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

Current primary energy use per square metre of floor area: 123 kWh/m<sup>2</sup> per year

### Low and zero carbon energy sources

Low and zero carbon energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting carbon. The following low or zero carbon energy sources are provided for this home:

- Air source heat pump

### Recommendations

None.

## About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by NES. You can get contact details of the accreditation scheme at [www.nesltd.co.uk](http://www.nesltd.co.uk), together with details of their procedures for confirming authenticity of a certificate and for making a complaint. A copy of the certificate has been lodged on a national register. It will be publicly available and some of the underlying data may be shared with others for the purposes of research, compliance and direct mailing of relevant energy efficiency information. The current property owner and/or tenant may opt out of having this information disclosed.

**Assessor's accreditation number:** NHER003911  
**Assessor's name:** Mr Stuart Thomas  
**Phone number:** 01872 562331  
**E-mail address:** [s.thomas@energyaccess.co.uk](mailto:s.thomas@energyaccess.co.uk)  
**Related party disclosure:** No related party

Further information about Energy Performance Certificates can be found under Frequently Asked Questions at [www.epcregister.com](http://www.epcregister.com).

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions.

The average household causes about 6 tonnes of carbon dioxide every year. Based on this assessment, your home currently produces approximately 1.4 tonnes of carbon dioxide every year. You could reduce emissions by switching to renewable energy sources.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions. The higher the rating the less impact it has on the environment.

## Your home's heat demand

This table shows the energy used for space and water heating by an average household in this property.

### Heat demand

Space heating (kWh per year)	1,419
Water heating (kWh per year)	2,119
